

A Cloud ERP Foundation for What's Next

Growing businesses need processes and insights that keep pace with change. GROW with SAP brings together ready-to-run cloud ERP, adoption resources, and a path to continuous innovation.

Consulting Solutions helps you discover, evaluate fit, establish a practical roadmap, and implement SAP S/4HANA Cloud Public Edition around your business priorities—from initial discovery through adoption and optimization.

Built to Help Your Business GROW

Get to Value Sooner.

Standard processes and SAP Activate provide a structured route from discovery to deployment. Timing depends on scope and readiness.

Simplify IT operations.

A cloud subscription shifts infrastructure management and updates to SAP while helping teams focus on business outcomes.

Keep improving.

Regular innovation (bi-annual), embedded analytics, and readily available AI capabilities help you evolve and incrementally improve processes over time.

Scale with confidence.

A common ERP foundation supports new users, entities, and markets as your organization expands.

40%

faster financial reporting timelines through integrated ERP workflows

\$25M+

in operational efficiencies and cost savings influenced through ERP modernization

10M+

enterprise records successfully migrated across SAP and ERP initiatives

What Powers the Offering

SAP S/4HANA Cloud Public Edition

Ready-to-run ERP processes across core business functions, including finance, procurement, sales, and manufacturing.

SAP Business Technology Platform

Integration, data, analytics, automation, and extension capabilities for needs beyond the ERP core, subject to licensing and scope.

SAP Activate and adoption resources

A guided implementation methodology, learning resources, and community support to help teams prepare, launch, and keep improving.

The Right Fit Starts with the Right Assessment

Public cloud ERP can be a strong choice for organizations willing to adopt standardized processes and manage extensions with a clean-core approach. It can also support subsidiaries, new entities, or businesses establishing an ERP foundation. Fit depends on process complexity, integration needs, industry requirements, and the current landscape.

DISCOVER → DESIGN → DEPLOY → OPTIMIZE

How Consulting Solutions Helps

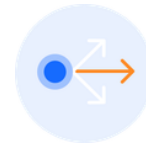

Readiness & Roadmap

Digital discovery, process mapping, solution fit assessment, licensing and bill-of-materials review, and implementation planning.

Implementation & Integration

Configuration, data migration planning, system integrations, testing, and go-live execution.

Extensions & Adoptions

SAP Build and other appropriate capabilities for tailored workflows, plus user training, change management, and post-launch optimization.

With GROW, the ERP is SaaS and the organizational change management becomes far more critical compared to the RISE program.

If you are moving from legacy SAP software such as Business One, or SAP ECC, or if you are moving from non-SAP platform (MS Dynamics, Netsuite, Infor), getting users to self-enable and access the system early on and know the SaaS offering to successfully deliver an implementation is our key capability.

Why Consulting Solutions?

Our ERP & SAP Practice connects technical SAP expertise with business-focused planning and execution. We help you make informed choices early, implement around your priorities, and carry improvements forward after go-live.

Ready to Explore GROW with SAP?

Connect with our ERP & SAP Practice to discuss your business requirements and determine the right cloud ERP path.
